CellExchange joins Homeland Security & Defense Business Council

Cambridge, MA, May 29, 2007 – CellExchange has joined the Homeland Security & Defense Business Council, an executive level industry group that promotes the role of industry in achieving the vision and mission for homeland security across both the public and the private sectors in the US and globally. CellExchange’s unique capabilities and experience with supporting defense and federal civilian organizations in their transformational efforts with innovative information technology solutions earned it a place on the Council.

CellExchange has conducted over one hundred Innovation Workshops to generate new ideas and approaches to solving business and technical problems, three of which were for the Joint Chiefs and the Office of Homeland Security. The company’s engagement model, which breaks efforts into parallel and convergent streams of work that enables focused, lean, and cost-efficient information technology support for transformational efforts involving multiple organizations, objectives, cultures, and technologies, is particularly beneficial for cross-cutting homeland security engagements.

“CellExchange has been privileged to work on innovative homeland security and information sharing solutions with a number of military and civilian organizations, including the Joint Chiefs of Staff. We are excited to join the Homeland Security & Defense Business Council and to contribute our technology competence and thought leadership to the Council’s charter, thereby playing a fulfilling role in the Nation’s security,” said CellExchange’s President, Krish Nangegadda.

Founded in 2000, CellExchange, Inc., is a Cambridge-based small-business systems integrator that assembles innovative IT solutions. CellExchange focuses especially on high-volume transactional systems integrated with the legacy infrastructure. The company uses standards-compliant technologies and a disciplined collaborative process to enable rapid incremental delivery. CellExchange is the only small business contributing member of the Service-Oriented Architecture (SOA) Consortium. For more information, visit www.cellexchange.com.
