CellExchange Joins DIMHRS Implementation Team

Cambridge, MA, June 19, 2006 — CellExchange, a systems integrator focusing on business transformation and IT change, today announced that it has joined the Northrop Grumman team to deliver Phase II of the Defense Integrated Military Human Resource System (DIMHRS) Personnel and Pay (Pers/Pay) Program.

"CellExchange has extensive experience implementing Human Capital Management solutions in the DoD," said Rachel Culberson, Director of Business Development at CellExchange. "DIMHRS is an exciting program for us, as it allows us to support an already strong team with our distinct integration capabilities."

DIMHRS (Pers/Pay) unifies all of the DoD personnel legacy systems into one fully functional enterprise resource system. It provides core military personnel and pay functions for all branches of the military through a software application that operates in a common operating environment. Most of these functions are performed in the field and are directly related to readiness, force management, and strength accounting. Providing the capability for all services to use one system will greatly enhance the military's ability to manage its resources.

DIMHRS (Pers/Pay) Phase II develops a multi-dimensional system that blends mission support to the warfighter, Personnel and Pay functional requirements, "best business" practices, technical requirements, and costs into the contractor's overall development strategy.

CellExchange will support the delivery of a technically optimized system that incorporates improved business practices and also complies with DoD standards for data and telecommunications. The DIMHRS (Pers/Pay) Full Operating Capability (FOC) shall support Joint Vision 2020 and Service oriented Joint Vision 2020, strategies, and modernization plans.

About CellExchange

CellExchange, headquartered on MIT's campus in Cambridge, MA, is an SBA small business systems integrator serving the Federal Government. The company applies thought-leadership for business transformation and IT change through prototyping, workshops, business cases, and commercial best practices with a domain focus on human capital management, information sharing, and supply chain management. CellExchange is technology agnostic, with distinctive competencies in J2EE, service-oriented architecture (SOA), mobile, and open source. For more information, visit www.cellexchange.com.
